May the road rise to meet you
May the wind be always at your back
May the sun shine warm upon your face
The rain fall soft upon your fields
And until we meet again
May God hold you in the hollow of his hand

The Blessing of St. Patrick

I am not flexible!
Just disorganized!

or is it...

I am not disorganized!
Just flexible!

This is a `generalframe`, using eight different characters from font `karta15` as parts of the framework. One might use it to point other people to important notes, hints and/or messages.

This `generalframe` uses symbols from Alexander Schrell's `umranda` (his eMail is: alexander‿schrell@w2.maus.de) collection. The material to be framed consists of quite a few lines to emphasize the fact that virtually anything can go inside a `generalframe`. Note that we are limited by TeX's memory as the material to frame has to be passed as an argument. You can't cheat by passing a `vbox` that has already been set (as you might with some other macros) since `generalframe` has to re-set all of it.

Last, but not least! This `generalframe` (with symbols from `umrandb`) displays some math:
$$E = mc^2$$
which everyone will immediately recognize as the famous Einstein formula for energy-mass-equivalence.
